CHAIRMAN MESSAGE

We are proud to introduce the new ray of **BESANI TRADING FOR PLASTIC MATERIALS!**

For Over 20 years in the market, we have been able to participate and execute hundreds of successful projects with national, and international organizations in the industry of plastic materials, recycling and sustainability.

As a family company at work for a better world, we've long been committed to sustainability and playing our part in helping to end plastic waste. We have a responsibility as producers as we collectively work to develop a recycling infrastructure to address the growing plastic waste crisis in the entire region.

As CEO of one such company, I encourage the need for a better and more sustainable way to address waste. Of tons of solid waste generated each year in the region, less than a quarter is recycled; it is our responsibility to target this risk and do all the required to save the Planet.

We offer you the best services and guarantee quality of business core ethics. For the past two decades we have been granted and appreciated as one of the best companies to cooperate and strategically partnering with as the market aiming the integrity and professionalism which we offer for every and each client we deal with.

ADEL ALBESANI – Chief Executive Officer

BESANI

TRADING FOR PLASTIC MTRLS

Besani Trading For Plastics Materials is a leading provider of plastic waste recycling, environmental and sustainability solutions. For 25 years, the company has been working to recycle the waste produced in commercial markets in a safe manner and to use it in various fields of manufacturing.

The company also cooperates with other companies within the framework of strategic partnerships in order to recycle metal, cardboard and wood, where we buy perishable materials from large factories in large quantities to be re-managed by high-level technical methods according to international specifications and sell them to factories again and manufacture them to turn into final products that benefit from them.

The consumer will benefit from the whole process getting the best products at a very competitive price, however this will lead the preservation of the environment from the effects of harmful emissions of gases and the impact on the ozone layer, which ensures a clean environment far from pollution.

In Besani Trading we believe in Innovation, Integrity, Efficiency, Community Partnership, and Equity

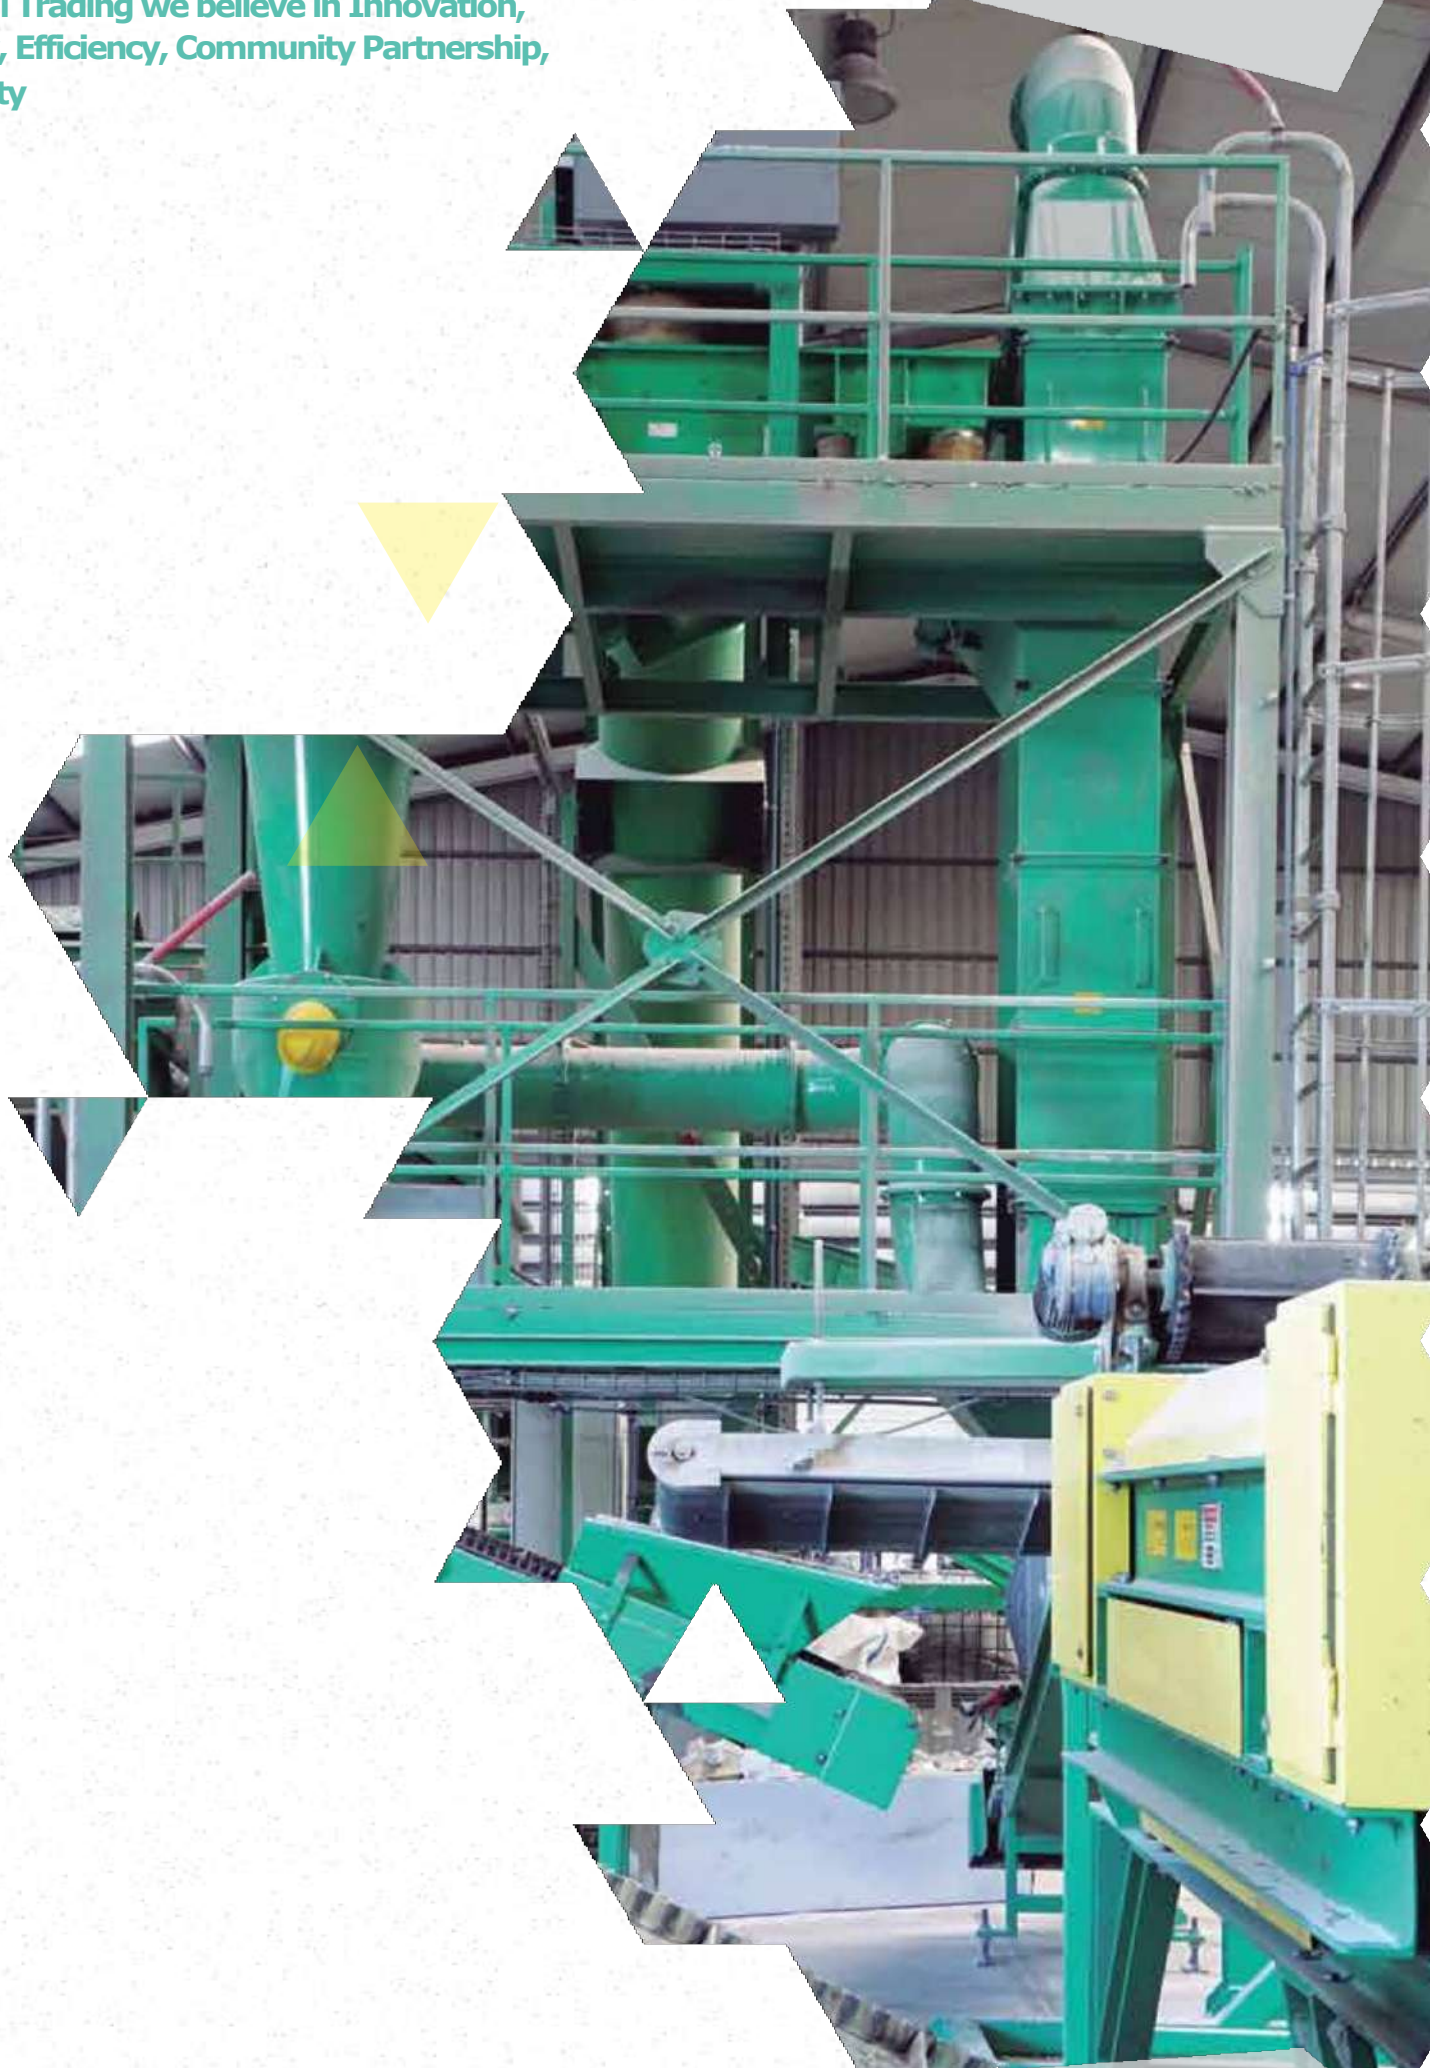

Among the roles played by us, is planning and working together in the Saudi market to implement and build the recycling of plastic factory for plastic injection in Saudi Arabia and start this factory as one of the most important factories in the KSA, which is Eco-friendly and obtained several environmental certificates. This factory specializes in the production of agricultural pots of all sizes, where recycled plastic granules are used in the production of all sizes of specialized agricultural containers from plastic residues for planting flowers and other seedlings.

Mission

- To manage plastic and solid waste as a resource, promoting equitable, sustainable, environmentally sound and cost-effective practices
- We aim an integrated system of waste reduction, reuse, recycling, and innovative technology

Vision

- Reducing the amount of waste by promoting individual and corporate responsibility.
- Recovering waste for its highest and best use while balancing rates and services.
- Transforming our business from burying waste to utilizing waste as a resource.
- Eliminating the need for landfills.

BESANI B

**BESANI HAS BEEN
ESTABLISHED IN 1999
WITH A PROMISING
INSIGHT AND GOAL**

In addition to being specialists in the field of recycling, sustainability and environmental solutions, we have played our role as a strategic partner for Wadi Rum Metal Recycling Company, one of the leading award-winning metal recycling companies based in Dubai, Jebel Ali.

As part of the trust that we have gained over the past two decades, we have cooperated with TADWEER - UAE, one of the leading companies in the collection of plastic and other waste with a partnership and joint-cooperation in the field of plastic waste recycling.

Cooperation was also made with the National Paper Company in Abu Dhabi (HQ in Dubai, Al Quoz area) and Mega Company in KIZAD, which is considered one of the most important companies to cooperate with it in this field.

One of the most important works carried out by our company is to rid large companies such as the National Feed Company and the Emirates Carbonate Company of plastic violations, as companies are rid of them by pressing them with specialized presses to be transferred from factories in a proper manner and converted into products that enter the manufacture of mats.

We, Besani Trading, are proud to employ more than 200 workers in several factories inside and outside the UAE in the field of plastic recycling, and to train and qualify many employees who work in several factories in the UAE, Saudi Arabia, Jordan, Egypt and several countries, where we have contributed to the development of recycling projects by virtue of the relations that bind us with European companies and the accumulated practical experiences in this field, as the company works with more than 20 types of plastic waste and deals with it in a technical and sophisticated manner.

One of the most important companies with which we have a real partnership is Winner International, which specializes in the field of plastic household utensils and promotional items for several international companies (Pepsi, Starbuck,..). This company is considered one of the most important companies that specialize in plastic industries. We, Besani Trading is a representative of Winner International under agreements through which everything related to consumer and promotional items raw materials is supplied, as the company produces more than 1,000 plastic products.

Besani is a major supplier of raw materials provided to Winner International.

BECAUSE ENVIRONMENT MATTERS

One of the important achievements of the company is dealing with the residues of medical factories that manufacture non-woven fabrics, where the quantities of industrial residues are very large, which constitutes a burden on companies in how to dispose of the residues, knowing that disposal is very expensive for their large quantities. And through our work in recycling these materials and dealing with them technically and turning them into granules, we intend to take advantage of them so that they are used in the manufacture of garden decorations. Among the companies dealt with in this field are the German company for non-woven fabrics and the company Saf for non-woven fabrics.

We also established the Besan Plastic Recycling Company in Zarqa Free Zone under the auspices of the Ministry of Environment. The project was inaugurated under the patronage of the Minister of Environment, His Excellency Dr. Khaled Al-Irany, and we obtained certificates of appreciation for this project, which is built on 7000 square meters and is considered one of the most important projects in the Hashemite Kingdom of Jordan

VALUES

Our company meets the legislative requirements that the markets and administrations have established for the correct development of activity in environmental matters, of quality and social responsibility.

Likewise, BESANI internally applies fundamental principles which have guaranteed the path which has led us to where we are now.

**BESANT IS ALWAYS
GREEN & ECO-FRIENDLY**
